Case Number:	CM15-0031514		
Date Assigned:	02/24/2015	Date of Injury:	11/13/2003
Decision Date:	05/18/2015	UR Denial Date:	01/29/2015
Priority:	Standard	Application Received:	02/19/2015

HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:
State(s) of Licensure: New Jersey, Alabama, California
Certification(s)/Specialty: Neurology, Neuromuscular Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 43 year old, male who sustained a work related injury on 11/13/03. The diagnoses have included right shoulder pain, status post right shoulder surgery, lumbar facetal pain, right sacroiliitis, clinical cervical radiculopathy and bilateral knee pain. The treatment has included x-rays, MRIs, neurodiagnostic studies, lumbar epidural steroid injections, lumbar facet injections, right sacroiliac joint injection, right shoulder injections and right shoulder surgery. In the PR-2 dated 12/11/14, the injured worker complains of persistent low back, right shoulder and bilateral knee pain. He rates the pain a 6/10. He complains of neck pain that radiates to right arm especially the right shoulder area. The treatment plan is a prescription for Hydrocodone.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Hydrocodone 10/325mg #90 with 3 refills: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids, Criteria for Use.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Criteria for use of opioids Page(s): 76-79.

Decision rationale: According to MTUS guidelines, Norco (Hydrocodone/Acetaminophen) is a synthetic opioid indicated for the pain management but not recommended as a first line oral analgesic. In addition and according to MTUS guidelines, ongoing use of opioids should follow specific rules: (a) Prescriptions from a single practitioner taken as directed, and all prescriptions from a single pharmacy. (b) The lowest possible dose should be prescribed to improve pain and function. (c) Office: Ongoing review and documentation of pain relief, functional status, appropriate medication use, and side effects. Four domains have been proposed as most relevant for ongoing monitoring of chronic pain patients on opioids: pain relief, side effects, physical and psychosocial functioning, and the occurrence of any potentially aberrant (or non adherent) drug-related behaviors. These domains have been summarized as the "4 A's" (analgesia, activities of daily living, adverse side effects, and aberrant drug taking behaviors). The monitoring of these outcomes over time should affect therapeutic decisions and provide a framework. According to the patient file, there is no objective documentation of pain and functional improvement to justify continuous use of Hydrocodone. Hydrocodone was used for longtime (since at least 2014) without documentation of functional improvement or evidence of return to work or improvement of activity of daily living. Therefore, the prescription of Hydrocodone 10/325mg #90, with 3 refills is not medically necessary.
