MAXIMUS Federal Services

Case Number:	CM15-0078371		
Date Assigned:	04/29/2015	Date of Injury:	12/05/2014
Decision Date:	05/26/2015	UR Denial Date:	03/23/2015
Priority:	Standard	Application Received:	04/23/2015

HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:
State(s) of Licensure: North Carolina
Certification(s)/Specialty: Family Practice

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 21-year-old male, who sustained an industrial injury on 12/05/2014. He reported an electrocution injury to his left arm. The injured worker is currently diagnosed as having electrocution injury to the left upper extremity. Treatment and diagnostics to date has included therapy, use of hand splint, and medications. In a progress note dated 03/04/2015, the injured worker presented with complaints of numbness from the distal forearm to left hand. According to the Utilization Review report, Independent Medical Review is being requested for an MRI of the right shoulder.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

MRI of the right shoulder without contrast: Upheld

Claims Administrator guideline: Decision based on MTUS ACOEM Chapter 9 Shoulder Complaints Page(s): 207-209.

MAXIMUS guideline: Decision based on MTUS ACOEM Chapter 9 Shoulder Complaints Page(s): 208.

Decision rationale: The ACOEM chapter on shoulder complaints and imaging studies states: Primary criteria for ordering imaging studies are: Emergence of a red flag (e.g., indications of intra-abdominal or cardiac problems presenting as shoulder problems), Physiologic evidence of tissue insult or neurovascular dysfunction (e.g., cervical root problems presenting as shoulder pain, weakness from a massive rotator cuff tear, or the presence of edema, cyanosis or Raynaud's phenomenon), Failure to progress in a strengthening program intended to avoid surgery, Clarification of the anatomy prior to an invasive procedure (e.g., a full thickness rotator cuff tear not responding to conservative treatment). The criteria as set forth above for imaging studies of the shoulder have not been met from review of the provided clinical documentation. Therefore, the request is not medically necessary.
