

HEAC 2016-2018 Review Discussion topics (not comprehensive):

1. PEL reviews
 - a. Format – review all potential toxic effects or focus on consensus endpoint of authoritative bodies.
 - b. Link references to articles (when available)
 - c. Identify LOAEL/NOAEL for each study
2. Conduct of meetings
 - a. More explicit separation of health effects and feasibility discussions.
 - b. Formally assess consensus to determine closure of review
3. Staff response to HEAC questions/suggestions
 - a. Enumerate questions from minutes and prepare response.
 - b. Track change versions of drafts
4. Meeting logistics –minutes, meeting space, time

Ideas for Going Forward:

Mid-point call in - establish standing call-in date/time (Day 45 between meetings) for HEAC members to get status report

Prioritization – set specific TLV/PEL value for review. Frees up more review of chemicals with no PEL.
