HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to a physician reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The physician reviewer is Board Certified in Family Practice, has a subspecialty in Preventive Medicine and is licensed to practice in California. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The physician reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

This is a 43 year old female claimant sustained a work related injury on 9/20/13 that resulted in foot pain and plantar fasciitis. Management has included therapy, steroid injections, orthotics, stretching and Tramadol for analgesia. A progress note on 9/12/13 indicated she had 9/10 pain with walking or standing. A request was made for a urine drug screen on 11/12/13 to ensure drug compliance.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Urine Drug Test: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids, screening for risk of addiction (tests).

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioid and Urine Toxicology Page(s): 83-91. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG)

Decision rationale: According to the California MTUS Chronic Pain Treatment Guidelines, urine toxicology screen is used to assess presence of illicit drugs or to monitor adherence to prescription medication program. There's no documentation from the provider to suggest that there was illicit drug use or noncompliance. There were no prior urine drug screen results that

indicated noncompliance, substance-abuse or other inappropriate activity. Furthermore screening for addiction risk should be performed with questionnaires such as the Cage, Skinner trauma, Opioid Risk Tools, etc. Such screening tests were also not indicated in the documentation.
