HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Acupuncture, has a subspecialty in Addiction Detoxification and is licensed to practice in New York. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The purpose of this review is to consider twelve acupuncture sessions. The patient is a female employee who has filed an industrial claim for left wrist injury that occurred on 1/31/13. Mechanism of injury is unspecified in the records reviewed. Currently the patient complains of clicking and catching of the wrist associated with pain, numbness and tingling. The treating physician requested twelve sessions of acupuncture to treat her pain and to reduce some of her symptoms. Records provided do not indicate patient received previous acupuncture therapy. The patient's diagnosis consists of deQuervains tendinitis and triggering the right ring finger. Her treatment to date includes, but is not limited to, MRI's, X-rays, physical therapy, injections, bracing, EMG/NCV studies, oral and topical pain and anti-inflammatory medications. In the utilization review report, dated 12/12/13, the UR determination did not approve the twelve sessions of acupuncture stating MTUS guidelines supports acupuncture if used in adjunct to physical rehabilitation and/or surgical intervention. Records reviewed do not indicate the patient is involved in physical rehabilitation; therefore, acupuncture for the left wrist is not medically necessary.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

ACUPUNCTURE 2X6 FOR LEFT WRIST: Upheld

Claims Administrator guideline: Decision based on MTUS Acupuncture Treatment Guidelines.

MAXIMUS guideline: Decision based on MTUS Acupuncture Treatment Guidelines.

Decision rationale: Initial acupuncture care is evaluated utilizing the MTUS guidelines for acupuncture medical treatment. MTUS recommends an initial trial of 3-6 visits of acupuncture. Additionally, MTUS states "acupuncture is used as an option when pain medication is reduced or not tolerated, it may be used as an adjunct to physical rehabilitation and/or surgical intervention to hasten functional recovery." Further acupuncture, beyond this initial trial will be considered based on "functional improvement", as defined by MTUS. There is no clinical data provided by the treating physician regarding a decrease or intolerance to her medication or any recent involvement in physical rehabilitation program. Therefore, given the MTUS guidelines for acupuncture care detailed above, including the initial trial that is less than twelve visits, the original request of twelve sessions of acupuncture is not medically necessary.
