Priority:	Standard	Application Received:	07/11/2014

HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Physical Medicine and Rehabilitation and is licensed to practice in Nevada. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The records presented for review indicate that this 59-year-old female was reportedly injured on March 10, 2006. The mechanism of injury is not listed in these records reviewed. The most recent progress note, dated March 27, 2014, indicates that there are ongoing complaints of pain in both knees, both arms, and the left hip. Current medications include Norco and Voltaren gel. No physical examination was performed on this date. Diagnostic imaging studies were not reviewed during this visit. Previous treatment is unknown. A request had been made for Hydrocodone/APAP and was not certified in the pre-authorization process on June 16, 2014.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Hydrocodone/APAP 10/325Mg #75 -27 Day Supply with 1 Refill: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Page(s): 74-78,88,91.

Decision rationale: Norco (Hydrocodone/Acetaminophen) is a short acting opiate indicated for the management of moderate to severe breakthrough pain. The California MTUS guidelines support short-acting opiates at the lowest possible dose to improve pain and function, as well as

the ongoing review and documentation of pain relief, functional status, appropriate medication use and side effects. The injured employee has chronic pain; however, there is no objective clinical documentation of improvement in their pain or function with the current regimen. As such, this request for Norco is not medically necessary.
