HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Physical Medicine & Rehabilitation and is licensed to practice in California. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

According to the records made available for review, this is a 52-year-old male with an 11/19/13 date of injury. At the time (12/16/13) of request for authorization for physical therapy twelve sessions to the lumbar spine, there is documentation of subjective (moderate improvement in the spine) and objective (numbness in the lateral foot, poor mobility in the lumbar spine, and positive straight leg raise) findings, current diagnoses (lumbar sciatica and lumbar facet pain), and treatment to date (6 previous physical therapy treatments). There is no documentation of functional benefit or improvement as a reduction in work restrictions; an increase in activity tolerance; and/or a reduction in the use of medications or medical services with previous physical therapy to date.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

PHYSICAL THERAPY TWELVE SESSIONS TO THE LUMBAR SPINE: Upheld

Claims Administrator guideline: The Claims Administrator did not base their decision on the MTUS. Decision based on Non-MTUS Citation MTUS: ACOEM, CHAPTER 12, 299

MAXIMUS guideline: The Expert Reviewer did not base their decision on the MTUS. Decision based on Non-MTUS Citation MTUS: CHRONIC PAIN MEDICAL TREATMENT GUIDELINES, PHYSICAL MEDICINE, 98

Decision rationale: MTUS Chronic Pain Medical Treatment Guidelines support a brief course of physical medicine for patients with chronic pain not to exceed 10 visits over 4-8 weeks with allowance for fading of treatment frequency, with transition to an active self-directed program of independent home physical medicine/therapeutic exercise. MTUS-Definitions identifies that any treatment intervention should not be continued in the absence of functional benefit or improvement as a reduction in work restrictions; an increase in activity tolerance; and/or a reduction in the use of medications or medical services. ODG recommends a limited course of physical therapy for patients with a diagnosis of lumbar sciatica not to exceed 10-12 visits over 8 weeks. ODG also notes patients should be formally assessed after a "six-visit clinical trial" to see if the patient is moving in a positive direction, no direction, or a negative direction (prior to continuing with the physical therapy) and when treatment requests exceeds guideline recommendations, the physician must provide a statement of exceptional factors to justify going outside of guideline parameters. Within the medical information available for review, there is documentation of diagnoses of lumbar sciatica and lumbar facet pain. In addition, there is documentation of 6 previous physical therapy sessions completed to date. However, there is no documentation of functional benefit or improvement as a reduction in work restrictions; an increase in activity tolerance; and/or a reduction in the use of medications or medical services with previous physical therapy to date. Therefore, based on guidelines and a review of the evidence, the request for physical therapy twelve sessions to the lumbar spine is not medically necessary.
