HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Internal Medicine and is licensed to practice in New York. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The claimant is a 55 year old female who sustained an industrial injury on 04/25/2007. The mechanism of injury was not provided for review. Her diagnoses include cervical disc disease, carpal tunnel syndrome right - status post (s/p) release, and right wrist DeQuervain's tenosynovitis. She continues to complain of neck pain and right wrist pain. On exam there is 90% range of motion of the cervical spine with pain to palpation over the right wrist. Treatment has included medical therapy and surgery. The treating provider has requested Omeprazole 20mg #60.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Omeprazole 20mg #60: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines NSAIDs, GI symptoms & cardiovascular risk Page(s): 69.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Page(s): 68.

Decision rationale: Per California MTUS 2009 proton pump inhibitors are recommended for patients taking non-steroidal anti-inflammatory drugs (NSAIDs) with documented gastrointestinal (GI) distress symptoms or specific GI risk factors. There is no documentation

indicating the patient has any symptoms or GI risk factors. GI risk factors include: age >65, history of peptic ulcer, GI bleeding, or perforation; concurrent use of aspirin, corticosteroids, and/or anticoagulants or high dose/multiple NSAID. The claimant has no documented GI issues. Based on the available information provided for review, the medical necessity for Prilosec has not been established. The requested medication is not medically necessary.
