HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Family Practice and is licensed to practice in California. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

This is a 50 year old male claimant sustained a work injury on 3/24/10 involving the neck, right shoulder and low back. He was diagnosed with right hip bursitis degenerative disk disease of the lumbar spine and a right shoulder SLAP lesion. His pain had been managed with muscle relaxants, opioids and NSAIDs. A request was made for a urine drug screen on 4/19/13.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Retrospective request for urine drug screen, DOS 4/19/13: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG)

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines urine toxicology Page(s): 83-91.

Decision rationale: According to the California MTUS Chronic Pain Treatment Guidelines, urine toxicology screen is used to assess presence of illicit drugs or to monitor adherence to prescription medication program. There's no documentation from the provider to suggest that there was illicit drug use or noncompliance. There were no prior urine drug screen results that indicated noncompliance, substance-abuse or other inappropriate activity. Based on the above references and clinical history a Urine Toxicology Screen is not medically necessary.
