HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Neurology, has a subspecialty in Neuromuscular Medicine and is licensed to practice in New Jersey. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The patient is a 59-year-old woman who sustained a work-related injury on August 8, 2010. Subsequently, she developed chronic pain and right leg pain. The patient was treated with Naproxen and Tramadol. According to a progress report dated on September 10, 2014, the patient continued to complain of chronic pain. Her lumbar spine pain was rated 8/10 and was constant and sharp radiating down to the right leg with numbness and tingling. The patient physical examination demonstrated lumbar tenderness with reduced range of motion, positive toe and heel walk. The patient was diagnosed with lumbar spine degeneration, lumbar spine radiculopathy and right hip sprain. The provider request authorization for pain management evaluation because of exacerbation of back pain.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Follow-up with Pain Management w/ [REDACTED]: Upheld

Claims Administrator guideline: The Claims Administrator did not base their decision on the MTUS. Decision based on Non-MTUS Citation Independent Medical Examinations and Consultations Chapter (ACOEM Practice Guidelines, 2nd Edition (2004), Chapter 7)

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Chronic pain programs, early intervention Page(s): 32-33.

Decision rationale: According to MTUS guidelines, the presence of red flags may indicate the need for specialty consultation. In addition, the requesting physician should provide a documentation supporting the medical necessity for a pain management evaluation with a specialist. The documentation should include the reasons, the specific goals and end point for using the expertise of a specialist. In the chronic pain programs, early intervention section of MTUS guidelines stated: < Recommendations for identification of patients that may benefit from early intervention via a multidisciplinary approach:(a) The patient's response to treatment falls outside of the established norms for their specific diagnosis without a physical explanation to explain symptom severity. (b) The patient exhibits excessive pain behavior and/or complaints compared to that expected from the diagnosis. (c) There is a previous medical history of delayed recovery. (d) The patient is not a candidate where surgery or other treatments would clearly be warranted. (e) Inadequate employer support. (f) Loss of employment for greater than 4 weeks. The most discernable indication of at risk status is lost time from work of 4 to 6 weeks. (Mayer 2003) >. There is no clear documentation that the patient needs a pain management evaluation as per MTUS criteria. There is no clear documentation that the patient had delayed recovery and a response to medications that falls outside the established norm. The provider did not document the reasons, the specific goals and end point for using the expertise of a specialist. Therefore, the request for Pain Management Referral is not medically necessary.
