### HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Chiropractic and Acupuncture and is licensed to practice in California. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

### CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 36 year old female who reported low back pain from injury sustained on 11/13/12 while lifting a patient for transfer. MRI of the lumbar spine revealed disc desiccation at L4-L5 and L5-S1 with disc protrusions. Patient was diagnosed with lumbar radiculopathy. Patient was treated with medication, chiropractic and acupuncture. Per notes dated 1/21/14, Patient complains of constant waist pain rated at 6/10; frequent bilateral shoulder pain rated at 7/0 and frequent bilateral leg pain rated at 7/10. Examination revealed decreased range of motion of the lumbar spine. There is no assessment in the provided medical records of functional efficacy with prior acupuncture visits. Patient hasn't had any long term symptomatic or functional relief with acupuncture care. Functional improvement means either a clinically significant improvement in activities of daily living or a reduction in work restrictions as measured during the history and physical exam.

### IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

**ACUPUNCTURE 3X WEEK X 6 WEEKS LUMBAR SPINE:** Upheld

**Claims Administrator guideline:** Decision based on MTUS Acupuncture Treatment Guidelines.

**MAXIMUS guideline:** Decision based on MTUS Acupuncture Treatment Guidelines.

**Decision rationale:** Per MTUS- Section 9792.24.1 Acupuncture Medical treatment Guidelines page 8-9. "Acupuncture is used as an option when pain medication is reduced and not tolerated, it may be used as an adjunct to physical rehabilitation and/or surgical intervention to hasten functional recovery". "Time to produce function improvement: 3-6 treatments. 2) Frequency: 1-3 times per week. 3) Optimum duration: 1-2 months. Acupuncture treatments may be extended if functional improvement is documented". Patient has had prior acupuncture treatment. There is lack of evidence that prior acupuncture care was of any functional benefit. There is no assessment in the provided medical records of functional efficacy with prior acupuncture visits. Requested visits exceed the quantity of acupuncture visits supported by the cited guidelines. Additional visits may be rendered if the patient has documented objective functional improvement. Per MTUS guidelines, Functional improvement means either a clinically significant improvement in activities of daily living or a reduction in work restrictions as measured during the history and physical exam. Per review of evidence and guidelines, 3X6 acupuncture treatments are not medically necessary.
