HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is licensed in Acupuncture and is licensed to practice in California. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 21 year old female who reported right knee pain from injury sustained on 04/01/13 after a slip and fall. Patient twisted the ankle and felt a pop in the knee. MRI (2013) of the right knee revealed mild soft tissue swelling. Patient is diagnosed with right medial meniscus tear; right knee anterior cruciate ligament sprain; right knee joint effusion; right patella subluxation; right knee traumatic synovitis and right knee early arthrofibrosis. Patient has been treated with medication, cortisone injection and physiotherapy. Per medical notes dated 12/06/13, patient continues to be symptomatic. Physical examination revealed tenderness over the body and posterior horn of the medial meniscus with decreased tibiofemoral rotation. Primary physician has requested initial trial of 12 acupuncture treatments which were modified to 6 by the utilization reviewer. Requested visits exceed the quantity of initial acupuncture visits supported by the cited guidelines.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Acupuncture 2 Times a Week for 6 Weeks for the Right Knee: Upheld

Claims Administrator guideline: Decision based on MTUS Acupuncture Treatment Guidelines.

MAXIMUS guideline: Decision based on MTUS Acupuncture Treatment Guidelines.

Decision rationale: Per MTUS Section 9792.24.1 Acupuncture Medical treatment Guidelines Page 8-9 Acupuncture is used as an option when pain medication is reduced and not tolerated, it may be used as an adjunct to physical rehabilitation and/or surgical intervention to hasten functional recovery. Time to produce function improvement: 3-6 treatments. 2) Frequency: 1-3 times per week. 3) Optimum duration: 1-2 months. Acupuncture treatments may be extended if functional improvement is documented. Patient has not had prior Acupuncture treatment. Primary physician has requested initial trial of 12 acupuncture treatments which were modified to 6 by the utilization reviewer. Per guidelines 3-6 treatments are supported for initial course of Acupuncture with evidence of functional improvement prior to consideration of additional care. Requested visits exceed the quantity of initial acupuncture visits supported by the cited guidelines. Additional visits may be rendered if the patient has documented objective functional improvement. MTUS Definition 9792.20 (f) Functional improvement means either a clinically significant improvement in activities of daily living or a reduction in work restrictions as measured during the history and physical exam. Per guidelines and review of evidence, 12 Acupuncture visits are not medically necessary.
