### HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Physical Medicine and Rehabilitation and is licensed to practice in Nevada. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

### CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The records presented for review indicate that this 48 year-old male was reportedly injured on 9/29/2010. The mechanism of injury is not listed in the records reviewed. The most recent progress note, dated 1/30/2014, indicates that there are ongoing complaints of left shoulder pain the physical examination demonstrated left shoulder: positive tenderness to palpation left peri-scapular region. Wound clean dry, no redness, no swelling. Shoulder motion okay 120/90/40/50. No recent diagnostic studies available for review. Previous treatment includes surgery, occupational therapy, medication, injections, and conservative treatment. A request had been made for OxyContin 20 mg CR, #120, and was not certified in the pre-authorization process on 3/14/2014.

### IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

**Oxycontin 20mg CR days supply 30, Quantity 120, MED 120:** Upheld

**Claims Administrator guideline:** The Claims Administrator did not cite any medical evidence for its decision.

**MAXIMUS guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Page(s): 74, 78, 93.

**Decision rationale:** Chronic Pain Medical Treatment Guidelines support long-acting opiates in the management of chronic pain when continuous around-the-clock analgesia is needed for an extended period of time. Management of opiate medications should include the lowest possible dose to improve pain and function, as well as the ongoing review and documentation of pain relief, functional status, appropriate medication use and side effects. The claimant suffers from left shoulder postoperative pain; however, there is no documentation of improvement in their pain level or function with the current treatment regimen. In the absence of subjective or objective clinical data, this request is not considered medically necessary.
