HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Orthopedic Surgery, and is licensed to practice in Mississippi. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 61-year-old gentleman who was reportedly injured on July 7, 2010. The mechanism of injury was not listed in these records reviewed. The most recent progress note dated June 3, 2014, indicated that there were ongoing complaints of neck pain radiating to the left upper extremity. Current medications are stated to include Norco, ibuprofen, Ambien, omeprazole, Senokot and Voltaren gel. There were stated to be no significant changes in the injured employee's physical examination. Diagnostic imaging studies were not reviewed during this visit. Previous treatment included massage therapy and home exercise. A request was made for Ambien and was not certified in the pre-authorization process on May 14, 2014.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Ambien 10mg #30: Upheld

Claims Administrator guideline: The Claims Administrator did not cite any medical evidence for its decision.

MAXIMUS guideline: The Expert Reviewer did not base their decision on the MTUS. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG) - TWC/ODG Integrated Treatment/Disability Duration Guidelines; Pain (Chronic) - Ambien (updated 07/10/14).

Decision rationale: Zolpidem (Ambien) is a prescription short-acting non-benzodiazepine hypnotic, which is approved for the short-term (usually two to six weeks) treatment of insomnia. The guidelines specifically do not recommend them for long-term use for chronic pain. As such, this request for Ambien is not medically necessary.
