Date Assigned:	07/25/2014	Date of Injury:	06/01/2002
Decision Date:	09/25/2014	UR Denial Date:	05/05/2014
Priority:	Standard	Application Received:	05/19/2014

HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Physical Medicine and Rehabilitation, and is licensed to practice in Nevada. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The records presented for review indicate that this 51 year-old individual was reportedly injured on 6/1/2002. The mechanism of injury is not listed. The most recent progress note, dated 6/27/2014, indicates that there are ongoing complaints of chronic low back pain that radiates in the bilateral lower extremities. The physical examination demonstrated lumbar spine: mildly tender over the right and left lumbar paraspinal muscles. Muscle strength 5/5 bilateral lower extremities. No recent diagnostic studies are available for review. Previous treatment includes medication, physical therapy, and conservative treatment. A request had been made for Fentanyl 75mcg and was not certified in the pre-authorization process on 5/5/2014.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Fentanyl 75mcg/hr Qty: 10: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Duragesic (fentanyl transdermal system) Page(s): 44.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Page(s): 44, 93.

Decision rationale: MTUS Guidelines support long-acting opiates in the management of chronic pain when continuous around-the-clock analgesia is needed for an extended period of time.

Management of opiate medications should include the lowest possible dose to improve pain and function, as well as the ongoing review and documentation of pain relief, functional status, appropriate medication use and side effects. Treatment guidelines specifically state Fentanyl is not recommended for musculoskeletal pain. Review of the available medical records, fails to document improvement in pain or function with the current treatment regimen. Given the date of injury, clinical presentation and current diagnosis, this request is not considered medically necessary.
