### HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Occupational Medicine and is licensed to practice in California. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

### CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

According to the records made available for review, this is a 42-year-old male with a 7/28/03 date of injury. At the time of the decision (4/24/14) for Gabapentin 10% / Lidocaine 2% in with aloe 0.5% / Emu Oil 30% / Capsaicin 0.025% / Menthol 10% / Camphor 5% prepared in gel, there is documentation of subjective (low back pain radiation to the bilateral lower extremities with numbness and tingling) and objective findings revealed tenderness over the lumbar spine and spasms. His current diagnoses include cervical spine discopathy, lumbar discopathy with radiculitis, facet arthropathy, and right knee meniscal tear. Treatment to date has been medications.

### IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

**Gabapentin 10% / Lidocaine 2% in with aloe 0.5% / Emu Oil 30% / Capsaicin 0.025% / Menthol 10% / Camphor 5% prepared in gel.:** Upheld

**Claims Administrator guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Topical Analgesics Page(s): 111.

**MAXIMUS guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Topical Analgesics Page(s): 111-113.

**Decision rationale:** MTUS Chronic Pain Medical Treatment Guidelines identifies that many agents are compounded as monotherapy or in combination for pain control; that ketoprofen, lidocaine (in creams, lotion or gels), capsaicin in a 0.0375% formulation, baclofen and other muscle relaxants, and gabapentin and other antiepilepsy drugs are not recommended for topical applications; and that any compounded product that contains at least one drug (or drug class) that is not recommended, is not recommended. Within the medical information available for review, there is documentation of diagnoses of cervical spine discopathy, lumbar discopathy with radiculitis, facet arthropathy, and right knee meniscal tear. However, the requested gel contains at least one drug (gabapentin and lidocaine) that is not recommended. Therefore, based on guidelines and a review of the evidence, the request for Gabapentin 10% / Lidocaine 2% in with aloe 0.5% / Emu Oil 30% / Capsaicin 0.025% / Menthol 10% / Camphor 5% prepared in gel is not medically necessary.
