HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Chiropractic, has a subspecialty in Pediatric Chiropractic and is licensed to practice in California. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 62 year old individual with an original date of injury of 5/11/01. The injured worker has recently undergone 6 approved chiropractic treatments through 4/10/14. There is no documented long-term objective, functional improvement from these treatments. The disputed issue is a request for 3 chiropractic treatments to include spinal manipulation, myofascial release, massage and electrical stimulation. An earlier Medical Review made an adverse determination regarding this request. The rationale for this adverse determination was that the request does not meet medical guidelines of the California MTUS.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

3 CHIROPRACTIC VISITS TO INCLUDE SPINAL MANIPULATION, MYOFASCIAL RELEASE, MASSAGE, AND ELECTRICAL STIMULATION: Upheld

Claims Administrator guideline: The Claims Administrator did not cite any medical evidence for its decision.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Manual Therapy and Manipulations Page(s): 58-60.

Decision rationale: The California MTUS Guidelines does recommend Chiropractic treatment, in general, for chronic pain, with a trial of 6 visits over 2 weeks, and up to a total of 18 visits

over 6-8 weeks, with evidence of objective, functional improvement. Recurrences/flare-ups: Need to re-evaluate treatment success, if RTW achieved then 1-2 visits every 4-6 months. There is no documented long-term objective, functional improvement from the previous treatments. The request for 3 chiropractic treatments to include spinal manipulation, myofascial release, massage and electrical stimulation is not medically necessary.
