HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Physical Medicine and Rehabilitation and is licensed to practice in California. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

According to the records made available for review, this is a 19-year-old male with a 10/14/13 date of injury. At the time (3/25/14) of request for authorization for Hydrocodone 10/325mg qty 30, there is documentation of subjective (left elbow pain with popping and weakness, and difficulty sleeping) and objective (tenderness to palpation over the left elbow with decreased range of motion) findings, current diagnoses (left elbow/forearm fracture), and treatment to date (ongoing therapy with Hydrocodone and physical modalities). In addition, medical report identifies that the patient is being evaluated for medication management and/or ongoing medication therapy with a qualitative drug screen. There is no documentation that the prescriptions are from a single practitioner and are taken as directed; the lowest possible dose is being prescribed; and there will be ongoing review and documentation of pain relief, functional status, appropriate medication use, and side effects; and functional benefit or improvement as a reduction in work restrictions; an increase in activity tolerance; and/or a reduction in the use of medications as a result of use of Hydrocodone.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Hydrocodone 10/325MG Qty 30: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines opioids.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids
Page(s): 74-80.

Decision rationale: MTUS Chronic Pain Medical Treatment Guidelines necessitate documentation that the prescriptions are from a single practitioner and are taken as directed; the lowest possible dose is being prescribed; and there will be ongoing review and documentation of pain relief, functional status, appropriate medication use, and side effects, as criteria necessary to support the medical necessity of opioids. MTUS-Definitions identifies that any treatment intervention should not be continued in the absence of functional benefit or improvement as a reduction in work restrictions; an increase in activity tolerance; and/or a reduction in the use of medications or medical services. Within the medical information available for review, there is documentation of a diagnosis of left elbow/forearm fracture. However, despite documentation that the patient is being evaluated for medication management and/or ongoing medication therapy with a qualitative drug screen, there is no (clear) documentation that the prescriptions are from a single practitioner and are taken as directed; the lowest possible dose is being prescribed; and there will be ongoing review and documentation of pain relief, functional status, appropriate medication use, and side effects. In addition, given documentation of ongoing treatment with Hydrocodone, there is no documentation of functional benefit or improvement as a reduction in work restrictions; an increase in activity tolerance; and/or a reduction in the use of medications as a result of use of Hydrocodone. Therefore, based on guidelines and a review of the evidence, the request for Hydrocodone 10/325mg qty 30 is not medically necessary.
