Date Assigned:	11/10/2014	Date of Injury:	06/30/1999
Decision Date:	01/06/2015	UR Denial Date:	10/28/2014
Priority:	Standard	Application Received:	11/04/2014

HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Orthopedic Surgery, and is licensed to practice in California. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

According to the records made available for review, this is a 54-year-old female with a 6/30/99 date of injury. At the time (10/14/14)of request for authorization for 1 prescription for Tramadol 50mg #30, there is documentation of subjective (neck pain and headaches) and objective (limited cervical spine range of motion, sensory deficit to the dermatome of L3/4 and partially L5, loss of triceps reflexes, frozen shoulder, and decreased range of motion of the left shoulder) findings, current diagnoses (cervical pain status post surgery and shoulder pain), and treatment to date (TENS unit and medications (including ongoing treatment with Tramadol and Naproxen)). There is no documentation that the prescriptions are from a single practitioner and are taken as directed; the lowest possible dose is being prescribed; and there will be ongoing review and documentation of pain relief, functional status, appropriate medication use, and side effects; and functional benefit or improvement as a reduction in work restrictions; an increase in activity tolerance; and/or a reduction in the use of medications as a result of Tramadol use to date.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

1 prescription for tramadol 50mg #30: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Page(s): 67-70, 82.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids Page(s): 74-80, 113. Decision based on Non-MTUS Citation Other Medical Treatment Guideline or Medical Evidence: Title 8, California Code of Regulations, section 9792.20

Decision rationale: MTUS Chronic Pain Medical Treatment Guidelines identifies documentation that the prescriptions are from a single practitioner and are taken as directed; the lowest possible dose is being prescribed; and there will be ongoing review and documentation of pain relief, functional status, appropriate medication use, and side effects; as criteria necessary to support the medical necessity of Opioids. In addition, specifically regarding Tramadol, MTUS Chronic Pain Medical Treatment Guideline identifies documentation of moderate to severe pain and Tramadol used as a second-line treatment (alone or in combination with first-line drugs), as criteria necessary to support the medical necessity of Tramadol. MTUS-Definitions identifies that any treatment intervention should not be continued in the absence of functional benefit or improvement as a reduction in work restrictions; an increase in activity tolerance; and/or a reduction in the use of medications or medical services. Within the medical information available for review, there is documentation of diagnoses of cervical pain status post surgery and shoulder pain. In addition, there is documentation of Tramadol used as a second line treatment. However, there is no documentation that the prescriptions are from a single practitioner and are taken as directed; the lowest possible dose is being prescribed; and there will be ongoing review and documentation of pain relief, functional status, appropriate medication use, and side effects. In addition, given documentation of ongoing treatment with Tramadol, there is no documentation functional benefit or improvement as a reduction in work restrictions; an increase in activity tolerance; and/or a reduction in the use of medications as a result of Tramadol use to date. Therefore, based on guidelines and a review of the evidence, the request for 1 prescription for Tramadol 50mg #30 is not medically necessary.
