HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:
 State(s) of Licensure: New York
 Certification(s)/Specialty: Anesthesiology

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

Patient had a date of injury on 8/23/2007. According to the progress note dated 10/3/14, the patient suffered from low back pain. The patient complained of minimal acid reflux. He employed a home exercise program, ice therapy, TENS unite and trigger point therapy. Diagnosis includes thoracic and lumbosacral sprain/strain.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Soma 350 MG #30: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Carisoprodol.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Carisoprodol Page(s): 29, 63.

Decision rationale: The CA MTUS does not recommend muscle relaxants for chronic pain. Non-sedating muscle relaxants are an option for short-term exacerbations of chronic low back pain. Soma (Carisoprodol) is the muscle relaxant requested in this case. This medication is sedating. No reports show any specific or significant improvements in pain or function as a

result of prescribing muscle relaxants. According to the MTUS guidelines, Soma is categorically not recommended for chronic pain, noting its habituating and abuse potential. Medical necessity for the requested medication has not been established. The requested medication is not medically necessary.
