HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Neurology, has a subspecialty in Pain Medicine and is licensed to practice in Florida. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

10/7/14 note indicates pain in the low back. Pain onset 2/2/14 and is described as helped by the pain medication and acupuncture. Exam notes antalgic gait with normal ROM in hips with right positive lumbar facet loading. Sensation was intact and strength was reported as 4/5 in bilateral lower extremities except hip flexion which was 3/5. SLR was negative in sitting position. Diagnosis was noted as lumbar DJD most pronounced at L4-5 and L5-S1. There was lumbar myofascial pain.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Lidocaine Oin 5% day supply; 30 qty: 50 refills: 0: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Topical Analgesics Page(s): 111.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines topical analgesics Page(s): 111.

Decision rationale: The medical records provided for review do not indicate a neuropathic pain condition with associated hyperalgesia/allodynia. The records do not report poor tolerance to oral medications or indicate the specific medications failed, specifically trials of antidepressants and anticonvulsants. MTUS supports this agent is primarily recommended for neuropathic pain

when trials of antidepressants and anticonvulsants have failed. As the records do not indicate specific antidepressants and anticonvulsants tried and failed, the medical records do not support use of this medication congruent with MTUS.

Voltaren Gel 1% day supply: 30 qty: 300 refills: 0: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Topical Analgesics Page(s): 111.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines topical analgesics Page(s): 111.

Decision rationale: The medical records provided for review do not indicate a neuropathic pain condition with associated hyperalgesia/allodynia. The records do not report poor tolerance to oral medications or indicate the specific medications failed, specifically trials of antidepressants and anticonvulsants. MTUS supports this agent is primarily recommended for neuropathic pain when trials of antidepressants and anticonvulsants have failed. As the records do not indicate specific antidepressants and anticonvulsants tried and failed, the medical records do not support use of this medication congruent with MTUS.
