HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Physical Medicine and Rehabilitation, has a subspecialty in Pain Management and is licensed to practice in California. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

This is a patient with a date of injury of 8/3/11. A utilization review determination dated 10/28/14 recommends non-certification of PT, Norco, and Ambien. A 10/21/14 medical report identifies pain in the neck, low back, right leg, left shoulder, and bilateral knees. On exam, there is positive anterior drawer bilaterally, tenderness, patellofemoral crepitation, ACL and MCL deficiency noted with large valgus deformity, positive anterior drawer and Lachman, "exam of the left shoulder reveals positive impingement on the right," lumbar spasm with positive SLR (straight leg raise) and decreased L5 sensation bilaterally, tenderness, and cervical tenderness with limited ROM (range of motion). Recommendations include PT, LESI as the patient had 70% improvement for 3-4 months with prior LESI, and referral to another provider for bilateral ACL tears.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Additional physical therapy, twice a week for the lumbar spine and cervical spine Qty: 12:
Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Physical Medicine.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Physical Medicine Page(s): 98-99.

Decision rationale: Regarding the request for physical therapy, Chronic Pain Medical Treatment Guidelines recommend up to 10 sessions with continuation of active therapies at home as an extension of the treatment process in order to maintain improvement levels. Within the documentation available for review, there is documentation of completion of prior PT sessions, but there is no documentation of specific objective functional improvement with the previous sessions and remaining deficits that cannot be addressed within the context of an independent home exercise program, yet are expected to improve with formal supervised therapy. Furthermore, the request exceeds the amount of PT recommended by the CA MTUS and, unfortunately, there is no provision for modification of the current request. In light of the above issues, the currently requested physical therapy is not medically necessary.

Norco 10/325 mg #180: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines 8 C.C.R. 9792.20 - 9792.26 MTUS (Effective July 18, 2009) Page(s): 44, 47, 75-79, 120.

Decision rationale: Regarding the request for Norco, California Pain Medical Treatment Guidelines note that it is an opiate pain medication. Due to high abuse potential, close follow-up is recommended with documentation of analgesic effect, objective functional improvement, side effects, and discussion regarding any aberrant use. Guidelines go on to recommend discontinuing opioids if there is no documentation of improved function and pain. Within the documentation available for review, there is no indication that the medication is improving the patient's function or pain (in terms of specific examples of functional improvement and percent reduction in pain or reduced NRS), no documentation regarding side effects, and no discussion regarding aberrant use. As such, there is no clear indication for ongoing use of the medication. Opioids should not be abruptly discontinued, but unfortunately, there is no provision to modify the current request to allow tapering. In light of the above issues, the currently requested Norco is not medically necessary.

Ambien 10 mg #30: Upheld

Claims Administrator guideline: The Claims Administrator did not base their decision on the MTUS. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG)

MAXIMUS guideline: The Expert Reviewer did not base their decision on the MTUS. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG) Chronic Pain, Insomnia treatment and Zolpidem

Decision rationale: Regarding the request for zolpidem (Ambien), California MTUS guidelines are silent regarding the use of sedative hypnotic agents. ODG recommends the short-term use (usually two to six weeks) of pharmacological agents only after careful evaluation of potential causes of sleep disturbance. They go on to state the failure of sleep disturbances to resolve in 7 to

10 days, may indicate a psychiatric or medical illness. Within the documentation available for review, there is no current description of the patient's insomnia, no discussion regarding what behavioral treatments have been attempted, and no statement indicating how the patient has responded to Ambien treatment. Furthermore, there is no indication that Ambien is being used for short term-use as recommended by guidelines. In the absence of such documentation, the currently requested zolpidem (Ambien) is not medically necessary.
