

Case Number:	CM14-0045470		
Date Assigned:	06/27/2014	Date of Injury:	01/26/2001
Decision Date:	02/05/2015	UR Denial Date:	03/07/2014
Priority:	Standard	Application Received:	04/01/2014

HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. The expert reviewer is Board Certified in Physical Medicine Rehab, has a subspecialty in Pain Medicine, and is licensed to practice in California. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/services. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

This is a patient with a date of injury of 1/26/01. A utilization review determination dated 3/7/14 recommends non-certification/modification of MS Contin, carisoprodol, and Norco. 3/19/14 medical report identifies low back pain 8/10 with medication and 9/10 without. There are spasms in the low back. On exam, there is tenderness and pain with ROM. UDS reportedly showed no inconsistency.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

MSContin 15mg #60: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Low Back, Opioids.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines 8 C.C.R. 9792.20 - 9792.26 MTUS (Effective July 18, 2009) Page(s): 44, 47, 75-79, 120.

Decision rationale: Regarding the request for MS Contin, California Pain Medical Treatment Guidelines note that it is an opiate pain medication. Due to high abuse potential, close follow-up is recommended with documentation of analgesic effect, objective functional improvement, side effects, and discussion regarding any aberrant use. Guidelines go on to recommend discontinuing opioids if there is no documentation of improved function and pain. Within the documentation

available for review, pain is improved by only 1 point on the VAS with medication and there is no indication that the medication is improving the patient's function (in terms of specific examples of functional improvement) and no discussion regarding aberrant use. As such, there is no clear indication for ongoing use of the medication. Opioids should not be abruptly discontinued, but unfortunately, there is no provision to modify the current request to allow tapering. In light of the above issues, the currently requested MS Contin is not medically necessary.

Carisprodol 350mg #30: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Low Back, Opioids.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines 8 C.C.R. 9792.20 - 9792.26 MTUS (Effective July 18, 2009). Page(s): 63-66.

Decision rationale: Regarding the request for carisoprodol, Chronic Pain Medical Treatment Guidelines support the use of non-sedating muscle relaxants to be used with caution as a 2nd line option for the short-term treatment of acute exacerbations of pain. Within the documentation available for review, there is no identification of a significant analgesic benefit (medications reportedly decreased pain by only 1 point on the VAS) or objective functional improvement as a result of the medication. Additionally, it does not appear that this medication is being prescribed for the short-term treatment of an acute exacerbation, as recommended by guidelines. In the absence of such documentation, the currently requested carisoprodol is not medically necessary.

Norco 10/325 #180: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Low Back, Opioids.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines 8 C.C.R. 9792.20 - 9792.26 MTUS (Effective July 18, 2009). Page(s): 44, 47, 75-79, 120.

Decision rationale: Regarding the request for Norco, California Pain Medical Treatment Guidelines note that it is an opiate pain medication. Due to high abuse potential, close follow-up is recommended with documentation of analgesic effect, objective functional improvement, side effects, and discussion regarding any aberrant use. Guidelines go on to recommend discontinuing opioids if there is no documentation of improved function and pain. Within the documentation available for review, pain is improved by only 1 point on the VAS with medication and there is no indication that the medication is improving the patient's function (in terms of specific examples of functional improvement) and no discussion regarding aberrant use. As such, there is no clear indication for ongoing use of the medication. Opioids should not be abruptly discontinued, but unfortunately, there is no provision to modify the current request to allow tapering. In light of the above issues, the currently requested Norco is not medically necessary.
