HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: Iowa, Illinois, Hawaii

Certification(s)/Specialty: Preventive Medicine, Occupational Medicine, Public Health & Gen Prev Med

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a female, who sustained an industrial injury on 08/16/2013. On provider visit dated 01/05/2015, the injured worker has reported right trapezial pain that radiated to right deltoid area. The diagnoses have included acquired spondylolisthesis disorder, displacement of cervical intervertebral disc without myelopathy disorder, brachial neuritis disorder, and strain of rotator cuff capsule disorder. Treatment plan to date has included Cervical MRI without dye, electromyogram and nerve conduction velocity of neck and upper extremities, and physical therapy for rotator cuff tear/shoulder stabilization. On 01/08/2015, Utilization Review non-certified Cervical MRI without dye. The ODG were cited.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Cervical MRI without dye: Upheld

Claims Administrator guideline: The Claims Administrator did not base their decision on the MTUS. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG); Work Loss Data Institute, LLC; Corpus Christi, TX; ww.odg.twc.com; Section: Neck & Upper Back (Acute & Chronic) (Updated 11/18/14) Indications for Imaging-MRI

MAXIMUS guideline: Decision based on MTUS ACOEM Chapter 8 Neck and Upper Back Complaints Page(s): 177,182. Decision based on Non-MTUS Citation Neck and Upper Back, Magnetic resonance imaging (MRI)

Decision rationale: ACOEM states "Criteria for ordering imaging studies are: Emergence of a red flag, Physiologic evidence of tissue insult or neurologic dysfunction, Failure to progress in a strengthening program intended to avoid surgery and Clarification of the anatomy prior to an invasive procedure." ODG states, "Not recommended except for indications list below. Patients who are alert, have never lost consciousness, are not under the influence of alcohol and/or drugs, have no distracting injuries, have no cervical tenderness, and have no neurologic findings, do not need imaging." Indications for imaging MRI (magnetic resonance imaging): Chronic neck pain (after 3 months conservative treatment), radiographs normal, neurologic signs or symptoms present Neck pain with radiculopathy if severe or progressive neurologic deficit Chronic neck pain, radiographs show spondylosis, neurologic signs or symptoms present Chronic neck pain, radiographs show old trauma, neurologic signs or symptoms present Chronic neck pain, radiographs show bone or disc margin destruction Suspected cervical spine trauma, neck pain, clinical findings suggest ligamentous injury (sprain), radiographs and/or CT "normal" Known cervical spine trauma: equivocal or positive plain films with neurological deficit- Upper back/thoracic spine trauma with neurological deficit. The treating physician has not provided evidence of red flags to meet the criteria above. As such the request for Cervical MRI without dye is not medically necessary.
