### HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:  
 State(s) of Licensure: New Jersey, Michigan, California  
 Certification(s)/Specialty: Neurology, Neuromuscular Medicine

### CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 66 year old male, who sustained an industrial injury on February 7, 2013. He has reported low back pain. The diagnoses have included chronic low back pain and lower extremity radiculitis. Treatment to date has included magnetic resonance imaging (MRI), physical therapy, weight loss program and oral medication. Currently, the IW complains of low back pain radiating to buttock and legs. Treatment includes oral medication and request for chiropractic, physiotherapy, and H-wave with supplies. On December 17, 2014 utilization review non-certified a request for H-Wave with supplies x 1 month rental. The Medical Treatment Utilization Schedule (MTUS) guidelines were utilized in the determination. Application for independent medical review (IMR) is dated January 16, 2015.

### IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

**H-Wave with supplies x 1 month rental:** Upheld

**Claims Administrator guideline:** Decision based on MTUS ACOEM Chapter 12 Low Back Complaints Page(s): 287, 303.

**MAXIMUS guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines H wave stimulation Page(s): 117.

**Decision rationale:** According to MTUS guidelines, H wave stimulation is not recommended in isolation. It could be used in diabetic neuropathy and neuropathic pain and soft tissue pain after failure of conservative therapies. There is no controlled supporting its use in radicular pain and focal limb pain. There is no documentation that the request of H wave device is prescribed with other pain management strategies in this case. Furthermore, there is no clear evidence for the need of H wave therapy. There is no documentation of patient tried and failed conservative therapies. There is no documentation of failure of first line therapy and conservative therapies including pain medications and physical therapy. Therefore a H-Wave Device is not medically necessary.
