HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:
State(s) of Licensure: California, Indiana, Oregon
Certification(s)/Specialty: Orthopedic Surgery

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 42 year old female who sustained an industrial injury on 7/13/13. The injured worker was diagnosed as having adhesive capsulitis of shoulder, left ulnar nerve neuritis and history of arthroscopic shoulder surgery. Currently, the injured worker was with complaints of left shoulder pain. Previous treatments included left shoulder capsular release, medication management, physical therapy and home exercise program. Physical examination was notable for tenderness of left anterior shoulder. The plan of care was for a left elbow ulnar nerve transposition.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Left Elbow Ulnar Nerve Transposition: Upheld

Claims Administrator guideline: Decision based on MTUS ACOEM Chapter 10 Elbow Disorders (Revised 2007) Page(s): 604.

MAXIMUS guideline: Decision based on MTUS ACOEM Chapter 10 Elbow Disorders (Revised 2007) Page(s): 18.

Decision rationale: CA MTUS/ACOEM Elbow Complaints Chapter 10 (2007 supplement) page 18 states that focused NCS/EMG with "inching technique" is required for the accurate diagnosis of cubital tunnel syndrome. As there is no evidence of cubital tunnel syndrome on the EMG from /2/25/14 the request is not medically necessary.
