HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:
 State(s) of Licensure: North Carolina
 Certification(s)/Specialty: Family Practice

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 47 year old male with an industrial injury dated 01/23/2013. The mechanism of injury is documented as a lifting injury causing pain in the lower back. Prior treatment included medications, physical therapy and chiropractic adjustments. He presents on 06/03/2015 with complaints of increased back pain with spasm of the back and some numbness. He was not working at the time. Physical exam noted lumbar paraspinal trigger points with decreased range of motion. Treatment plan included back brace, oral medications and pain gel. The treatment request is for a back brace.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Back Brace: Upheld

Claims Administrator guideline: Decision based on MTUS ACOEM Chapter 12 Low Back Complaints Page(s): 301. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG), Low Back- Lumbar & Thoracic (Acute & Chronic) Chapter (Online version).

MAXIMUS guideline: Decision based on MTUS ACOEM Chapter 12 Low Back Complaints Page(s): 301.

Decision rationale: The ACOEM chapter on low back complaints and treatment recommendations states: Lumbar supports have not been shown to have any lasting benefit beyond the acute phase of symptom relief. This patient has chronic ongoing low back complaints and is status post-lumbar laminectomy. Per the ACOEM, lumbar supports have no lasting benefit outside of the acute phase of injury. This patient is well past the acute phase of injury and there is no documentation of acute flare up of chronic low back pain. Therefore criteria for use of lumbar support per the ACOEM have not been met and the request is not medically necessary.
