HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Physical Medicine & Rehabilitation, Pain Management

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 59 year old female who sustained an industrial injury on 1/3/01. The mechanism of injury was unclear. She currently complains of right shoulder discomfort. She has decreased range of motion and strength Medications were Naprosyn, temazepam. Diagnosis was right shoulder posttraumatic arthritis. Treatments to date include physical therapy; home exercise program; medication. There were no diagnostic available for review. On 6/11/15 Utilization Review evaluated a request for temazepam.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Temazepam 30mg QTY: 30: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Benzodiazepines Page(s): 24, 48.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Benzodiazepines Page(s): 24 of 127.

Decision rationale: Regarding the request for temazepam, Chronic Pain Medical Treatment Guidelines state the benzodiazepines are "Not recommended for long-term use because long-

term efficacy is unproven and there is a risk of dependence. Most guidelines limit use to 4 weeks. Tolerance to anxiolytic effects occurs within months and long-term use may actually increase anxiety. A more appropriate treatment for anxiety disorder is an antidepressant." Within the documentation available for review, there is no documentation identifying any objective functional improvement as a result of the use of the medication and no rationale provided for long-term use of the medication despite the CA MTUS recommendation against long-term use. Benzodiazepines should not be abruptly discontinued, but unfortunately, there is no provision to modify the current request to allow tapering. In the absence of such documentation, the currently requested temazepam is not medically necessary.
