HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Physical Medicine & Rehabilitation

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

This 48 year old female sustained an industrial injury on 7/01/09. She subsequently reported right elbow pain. Diagnoses include myofascial pain syndrome. Treatments to date include x-ray and MRI testing, injections, chiropractic care, acupuncture, physical therapy, injections and prescription pain medications. The injured worker continues to experience right elbow pain. Upon examination, there was tenderness to the right lateral epicondyle. There were spasms to the right trapezius. Spurling's was negative. A request for urine drug screen was made by the treating physician.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Urine drug screen: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids, Drug testing.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Drug Testing, page 43.

Decision rationale: Per MTUS Guidelines, urine drug screening is recommended as an option before a therapeutic trial of opioids and for on-going management to differentiate issues of abuse, addiction, misuse, or poor pain control; none of which apply to this patient who has been prescribed long-term opioid for this chronic injury. Presented medical reports from the provider have unchanged chronic severe pain symptoms with unchanged clinical findings of restricted range and tenderness without acute new deficits or red-flag condition changes. Treatment plan remains unchanged with continued medication refills without change in dosing or prescription for chronic pain. There is no report of aberrant behaviors, illicit drug use, and report of acute injury or change in clinical findings or risk factors to support frequent UDS. Documented abuse, misuse, poor pain control, history of unexpected positive results for a non-prescribed scheduled drug or illicit drug or history of negative results for prescribed medications may warrant UDS and place the patient in a higher risk level; however, none is provided. The Urine drug screen is not medically necessary and appropriate.
