HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Preventive Medicine, Occupational Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 61-year-old male, who sustained an industrial injury on 5/14/2008. Diagnoses have included pain in joint, left shoulder region and brachial neuritis or radiculitis not otherwise specified. Treatment to date has included left shoulder surgery, physical therapy, corticosteroid injections and medication. According to the progress report dated 5/26/2015, the injured worker complained of left shoulder pain with loss of motion and muscle atrophy into the left upper extremity. Physical exam revealed continued atrophy in the left upper extremity. There was loss of range of motion. Authorization was requested for Norco.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Norco 5/325mg, #60: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids, Hydrocodone/Acetaminophen Page(s): 90, 101.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids Section, Weaning of Medications Section Page(s): 74-95, 124.

Decision rationale: The MTUS Guidelines do not recommend the use of opioid pain medications, in general, for the management of chronic pain. There is guidance for the rare instance where opioids are needed in maintenance therapy, but the emphasis should remain on non-opioid pain medications and active therapy. Long-term use may be appropriate if the patient is showing measurable functional improvement and reduction in pain in the absence of non-compliance. Functional improvement is defined by either significant improvement in activities of daily living or a reduction in work restriction as measured during the history and physical exam. The injured worker has been taking Norco for an extended period without objective documentation of functional improvement or significant decrease in pain. Additionally, this medication is recommended for short-term use, not for chronic pain as in this case. It is not recommended to discontinue opioid treatment abruptly, as weaning of medications is necessary to avoid withdrawal symptoms when opioids have been used chronically. This request however is not for a weaning treatment, but to continue treatment. The request for Norco 5/325mg, #60 is determined to not be medically necessary.
