### HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:  
 State(s) of Licensure: New York, Pennsylvania, Washington  
 Certification(s)/Specialty: Internal Medicine, Geriatric Medicine

### CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 42-year-old male who sustained an industrial injury on 10/12/2004 resulting in low back and abdominal pain. He was diagnosed with inguinal hernia, lumbosacral disc degeneration, and spondylosis. Documented treatment has included inguinal hernia repair, trigger point injections, physical therapy, home exercise, and medication which he states helps relieve pain and enable him to perform activities of daily living. The injured worker continues to present with back pain and limited range of motion. The treating physician's plan of care includes Norco 10-325 mg. He is not presently working.

### IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

**Norco 10/325mg #120:** Upheld

**Claims Administrator guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Opioids Page(s): 80.

**MAXIMUS guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Page(s): 74-80.

**Decision rationale:** Per the guidelines, in opioid use, ongoing review and documentation of pain relief, functional status, appropriate medication use and side effects is required. Satisfactory response to treatment may be reflected in decreased pain, increased level of function or improved quality of life. The MD visit fails to document any significant improvement in pain, functional status or a discussion of side effects specifically related to opioids to justify use per the guidelines. Additionally, the long-term efficacy of opioids for chronic back pain is unclear but appears limited. The medical necessity of Norco is not substantiated in the records.
