HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: Texas, Florida, California

Certification(s)/Specialty: Preventive Medicine, Occupational Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 55 year old female, who sustained an industrial injury on November 20, 2012. The injured worker was diagnosed as having lumbar laminectomy, foraminotomy and fusion, lumbar spondylolisthesis, post-operative right leg paresthesias, greater trochanter bursitis, chronic intractable pain and right sacroiliac joint dysfunction. Treatment to date has included surgery, therapy and medication. A progress note dated May 21, 2015 provides the injured worker complains of low back pain with radiating and numbness down the right leg and right hip pain both rated 4.5/10. Physical exam notes tenderness over the sacroiliac joint and greater trochanter. There is positive straight leg raise on the right. The plan includes Percocet and follow-up.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Percocet 10/325mg #60: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids Page(s): 79, 80 and 88.

Decision rationale: This claimant was injured in 2012 with lumbar laminectomy, foraminotomy and fusion, lumbar spondylolisthesis, post-operative right leg paresthesias, greater trochanter bursitis, chronic intractable pain and right sacroiliac joint dysfunction. Treatment to date has included surgery, therapy and medication. As of May, there is still low back pain. The current California web-based MTUS collection was reviewed in addressing this request. They note in the Chronic Pain section: When to Discontinue Opioids: Weaning should occur under direct ongoing medical supervision as a slow taper except for the below mentioned possible indications for immediate discontinuation. They should be discontinued: (a) If there is no overall improvement in function, unless there are extenuating circumstances. When to Continue Opioids (a) If the patient has returned to work (b) If the patient has improved functioning and pain. In the clinical records provided, it is not clearly evident these key criteria have been met in this case. Moreover, in regards to the long term use of opiates, the MTUS also poses several analytical necessity questions such as: has the diagnosis changed, what other medications is the patient taking, are they effective, producing side effects, what treatments have been attempted since the use of opiates, and what is the documentation of pain and functional improvement and compare to baseline. These are important issues, and they have not been addressed in this case. As shared earlier, there especially is no documentation of functional improvement with the regimen. The request for the opiate usage is not certified per MTUS guideline review. The request is not medically necessary.
