HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Preventive Medicine, Occupational Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 42-year-old female, who sustained an industrial injury on January 19, 2007. Treatment to date has included physical therapy, NSAIDS, opioid pain medications, and home exercise program. Currently, the injured worker complains of continued pain in her bilateral shoulders with associated stiffness and weakness. She reports that her pain will frequently wake her up at night if she rolls onto either shoulder. On physical examination, the injured worker has pain range of motion of the bilateral shoulders and positive impingements tests bilaterally. She has decreased strength in the bilateral supraspinatus with pain on isolation and loading. The diagnoses associated with the request include rotator cuff sprain-strain, adhesive capsulitis of the bilateral shoulder, bilateral subacromial impingement and internal rotation contractures. The treatment plan includes physical therapy sessions to the bilateral shoulders, continuation of home exercise program, continuation of Norco and ibuprofen.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Norco 10/325mg #60: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids Page(s): 112.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids Section, Weaning of Medications Section Page(s): 74-95, 124.

Decision rationale: The MTUS Guidelines do not recommend the use of opioid pain medications, in general, for the management of chronic pain. There is guidance for the rare instance where opioids are needed in maintenance therapy, but the emphasis should remain on non-opioid pain medications and active therapy. Long-term use may be appropriate if the patient is showing measurable functional improvement and reduction in pain in the absence of non-compliance. Functional improvement is defined by either significant improvement in activities of daily living or a reduction in work restriction as measured during the history and physical exam. The injured worker has been taking Norco, as needed, for pain for an extended period without objective documentation of functional improvement or significant decrease in pain. It is not recommended to discontinue opioid treatment abruptly, as weaning of medications is necessary to avoid withdrawal symptoms when opioids have been used chronically. This request however is not for a weaning treatment, but to continue treatment. The request for Norco 10/325mg #60 is determined to not be medically necessary.
