HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Emergency Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 48-year-old female, who sustained an industrial injury on 9-28-2006. The mechanism of injury is unknown. The injured worker was diagnosed as having cervical degenerative disc disease with right upper extremity pain and lumbar discogenic disease. There is no record of a recent diagnostic study. Treatment to date has included therapy and medication management. In a progress note dated 6-23-2015, the injured worker complains of neck pain, headaches, neck cracking, bilateral upper extremities symptoms and low back pain radiating to the bilateral lower extremities. Physical examination showed cervical and lumbar tenderness. The treating physician is requesting cervical epidural steroid injection at cervical 7-thoracic 1.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Cervical Epidural Steroid Injection, C7-T1 (thoracic): Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Epidural Steroid Injections (ESIs) Page(s): 46.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines p. 46, Epidural steroid injections (ESIs) Page(s): 46.

Decision rationale: The requested Cervical Epidural Steroid Injection, C7-T1 (thoracic), is not medically necessary. Chronic Pain Medical Treatment Guidelines, p. 46, Epidural steroid injections (ESIs) note the criteria for epidural injections are: "1) Radiculopathy must be documented by physical examination and corroborated by imaging studies and/or electrodiagnostic testing. 2) Initially unresponsive to conservative treatment (exercises, physical methods, NSAIDs and muscle relaxants)." The injured worker has neck pain, headaches, neck cracking, bilateral upper extremities symptoms and low back pain radiating to the bilateral lower extremities. Physical examination showed cervical and lumbar tenderness. The treating physician has not documented physical exam evidence indicative of radiculopathy such as deficits in dermatomal sensation, reflexes or muscle strength; nor positive imaging and/or electrodiagnostic findings indicative of radiculopathy. The criteria noted above not having been met, Cervical Epidural Steroid Injection, C7-T1 (thoracic) is not medically necessary.
