HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Orthopedic Surgery

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 56 year old female who sustained an industrial injury on 02/21/11. Initial complaints and diagnoses are not available. Treatments to date include medications and epidural steroid injections. Diagnostic studies a MRI of the cervical spine. Current complaints include neck pain. In a progress note dated 01/08/15 the treating provider reports the plan of care as posterior lumbar fusion at L4-5 and L5-S1. The requested treatments are posterior lumbar fusion at L4-5 and L5-S1, EKG with interpretation, and initial consultation.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Posterior lumbar interbody fusion at L4-L5 and L5-S1: Upheld

Claims Administrator guideline: Decision based on MTUS ACOEM Chapter 12 Low Back Complaints.

MAXIMUS guideline: Decision based on MTUS ACOEM Chapter 12 Low Back Complaints Page(s): 307. Decision based on Non-MTUS Citation Official Disability Guidelines, Low back, Spinal Fusion.

Decision rationale: The ACOEM Guidelines Chapter 12 Low Back Complaints page 307 state that lumbar fusion, "except for cases of trauma-related spinal fracture or dislocation, fusion of the spine is not usually considered during the first three months of symptoms. Patients with increased spinal instability (not work-related) after surgical decompression at the level of degenerative spondylolisthesis may be candidates for fusion." According to the ODG, Low back, Fusion (spinal) should be considered for 6 months of symptom. Indications for fusion include neural arch defect, segmental instability with movement of more than 4.5 mm, revision surgery where functional gains are anticipated, infection, tumor, deformity and after a third disc herniation. In addition, ODG states, there is a lack of support for fusion for mechanical low back pain for subjects with failure to participate effectively in active rehab pre-op, total disability over 6 months, active psych diagnosis, and narcotic dependence. In this particular patient there is lack of medical necessity for lumbar fusion as there is no evidence of segmental instability greater than 4.5 mm, severe stenosis or psychiatric clearance from the exam note of 1/8/15 to warrant fusion. Therefore the determination is non-certification for lumbar fusion.

Initial consultation: Upheld

Claims Administrator guideline: The Claims Administrator did not cite any medical evidence for its decision.

MAXIMUS guideline: The Expert Reviewer did not base their decision on the MTUS. Decision based on Non-MTUS Citation Official Disability Guidelines, Pain, Office Visits.

Decision rationale: As the requested surgical procedure is not medically necessary, none of the associated services are medically necessary and appropriate.

EKG and EKG Interpretation: Upheld

Claims Administrator guideline: The Claims Administrator did not cite any medical evidence for its decision.

MAXIMUS guideline: The Expert Reviewer did not base their decision on the MTUS. Decision based on Non-MTUS Citation Official Disability Guidelines, Low Back, Preoperative testing.

Decision rationale: As the requested surgical procedure is not medically necessary, none of the associated services are medically necessary and appropriate.
