HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: Massachusetts

Certification(s)/Specialty: Physical Medicine & Rehabilitation, Pain Management

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker sustained a work-related injury on 03/22/08 and continues to be treated for low back pain. The requesting provider documents medications as working well and without side effects. Physical examination findings include decreased lumbar spine range of motion and decreased bilateral lower extremity sensation. Medications include Norco at a total MED (morphine equivalent dose) of less than 120 mg/day.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Norco 10/325mg #120: Overturned

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Opioids.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines (1) Pain Outcomes and Endpoints, p8, (2) Opioids, criteria for use, p76-80 (3) Opioids, dosing, p86 Page(s): 8, 76-80, 86.

Decision rationale: Guidelines indicate that when an injured worker has reached a permanent and stationary status or maximal medical improvement, that does not mean that they are no

longer entitled to future medical care. When prescribing controlled substances for pain, satisfactory response to treatment may be indicated by the patient's decreased pain, increased level of function, or improved quality of life. Norco (hydrocodone/acetaminophen) is a short acting combination opioid often used for intermittent or breakthrough pain. In this case, it is being prescribed as part of the claimant's ongoing management. There are no identified issues of abuse, addiction, or poor pain control. There are no inconsistencies in the history, presentation, the claimant's behaviors, or by physical examination. The total MED (morphine equivalent dose) is less than 120 mg per day consistent with guideline recommendations. Therefore, the continued prescribing of Norco was medically necessary.
