HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: Montana

Certification(s)/Specialty: Preventive Medicine, Occupational Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 27 year old male, who sustained an industrial injury on 3/25/14 with a blunt traumatic injury to the neck and left arm. The injured worker was diagnosed as having left hand pain, chronic pain syndrome, pain in left shoulder joint, left arm pain, pain in left elbow, left arm CRPS and stroke. Treatment to date has included chiropractic treatment, acupuncture, physical therapy and oral medications. Currently, the injured worker complains of left hemiparesis and pain in left arm and leg. Physical examination shows limited range of motion of left shoulder, elbow, wrist, fingers, left hip and knee. The treatment plan includes request for authorization for physical/occupational therapy, 30 visits for the left shoulder.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Retro 30 Physical Therapy Visits of Left Shoulder (DOS: 11/10/2014-02/16/2015): Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Physical medicine Page(s): 98-99. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG), Shoulder, Physical therapy.

Decision rationale: The MTUS notes that physical medicine is recommended as indicated below. Passive therapy (those treatment modalities that do not require energy expenditure on the part of the patient) can provide short term relief during the early phases of pain treatment and are directed at controlling symptoms such as pain, inflammation and swelling and to improve the rate of healing soft tissue injuries. They can be used sparingly with active therapies to help control swelling, pain and inflammation during the rehabilitation process. Active therapy is based on the philosophy that therapeutic exercise and/or activity are beneficial for restoring flexibility, strength, endurance, function, range of motion, and can alleviate discomfort. Active therapy requires an internal effort by the individual to complete a specific exercise or task. This form of therapy may require supervision from a therapist or medical provider such as verbal, visual and/or tactile instruction(s). Patients are instructed and expected to continue active therapies at home as an extension of the treatment process in order to maintain improvement levels. Home exercise can include exercise with or without mechanical assistance or resistance and functional activities with assistive devices. (Colorado, 2002) (Airaksinen, 2006) For myalgia and myositis, unspecified (ICD9 729.1), 9-10 visits over 8 weeks are recommended. The ODG guidelines note that for rotator cuff syndrome/Impingement syndrome (ICD9 726.1; 726.12), recommended medical treatment for physical therapy is 10 visits over 8 weeks. For sprained shoulder (ICD9 840; 840.4), medical treatment is 10 visits over 8 weeks. The Utilization Review on 1/29/15 did certify 12 PT visits. The request for retro 30 Physical Therapy Visits for the Left Shoulder (DOS: 11/10/2014-02/16/2015) exceeds the recommended number of visits and is not medically necessary.
