HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: Texas, Florida, California

Certification(s)/Specialty: Preventive Medicine, Occupational Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a male who sustained an industrial injury on 11/13/2013. He has reported subsequent neck, right shoulder, left wrist and low back pain and was diagnosed with sprain/strain of the neck, right shoulder, left wrist and lumbar spine. Treatment to date has included oral pain medication, physical therapy and a cortisone injection. In a progress note dated 01/26/2015, the injured worker complained of bilateral wrist, hand, shoulder, neck and low back pain that was rated as 9/10. Objective findings were notable for reduced range of motion of the neck, low back and shoulders. A request for authorization of 24 sessions of physical therapy was made.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

24 Physical Therapy Visits: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines 8 C.C.R. 9792.20-9792.26 MTUS (Effective July 18, 2009) Page(s): 98 of 127.

Decision rationale: The MTUS does permit physical therapy in chronic situations, noting that one should allow for fading of treatment frequency (from up to 3 visits per week to 1 or less), plus active self-directed home Physical Medicine. The conditions mentioned are Myalgia and myositis, unspecified (ICD9 729.1): 9-10 visits over 8 weeks; Neuralgia, neuritis, and radiculitis, unspecified (ICD9 729.2) 8-10 visits over 4 weeks; and Reflex sympathetic dystrophy (CRPS) (ICD9 337.2): 24 visits over 16 weeks. This claimant does not have these conditions. And, after several documented sessions of therapy, it is not clear why the patient would not be independent with self-care at this point. Also, there are especially strong caveats in the MTUS/ACOEM guidelines against over treatment in the chronic situation supporting the clinical notion that the move to independence and an active, independent home program is clinically in the best interest of the patient. They cited: 1. Although mistreating or under treating pain is of concern, an even greater risk for the physician is over treating the chronic pain patient. Over treatment often results in irreparable harm to the patient's socioeconomic status, home life, personal relationships, and quality of life in general. 2. A patient's complaints of pain should be acknowledged. Patient and clinician should remain focused on the ultimate goal of rehabilitation leading to optimal functional recovery, decreased healthcare utilization, and maximal self-actualization. This request for more skilled, monitored therapy was appropriately non-certified and is not medically necessary.
