HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:
 State(s) of Licensure: Pennsylvania, Ohio, California
 Certification(s)/Specialty: Physical Medicine & Rehabilitation

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The 64 year old male injured worker suffered an industrial injury on 10/13/2010. The diagnoses were cervical fusion. The diagnostics included cervical x-rays cervical magnetic resonance imaging. The injured worker had been treated with cervical fusion, medications and physical therapy. The treating provider reported continued cervical chronic pain. The treatment plan included additional Physical Therapy 2 Times a Week for 6 Weeks Cervical Spine.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Physical Therapy 2 Times A Week for 6 Weeks Cervical Spine: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Physical Medicine.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Physical Medicine Page(s): 98-99.

Decision rationale: MTUS encourages physical therapy with an emphasis on active forms of treatment and patient education. This guideline recommends transition from supervised therapy to active independent home rehabilitation. Given the timeline of this injury and past treatment,

the patient would be anticipated to have previously transitioned to such an independent home rehabilitation program. The records do not provide a rationale at this time for additional supervised rather than independent rehabilitation. This request is not medically necessary.
