### HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:  
 State(s) of Licensure: New Jersey, Michigan, California  
 Certification(s)/Specialty: Neurology, Neuromuscular Medicine

### CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 64 year old male who sustained an industrial injury on 5/23/13. The injured worker reported symptoms in the back and lower extremities. The injured worker was diagnosed as having multiple levels foraminal stenosis greatest at L5 with radiculopathy. Treatments to date have included epidural injection, physical therapy, topical patches, lumbosacral orthosis, transcutaneous electrical nerve stimulation unit, and home exercise program. Currently, the injured worker complains of back pain with radiation to the lower extremities. The plan of care was for medication prescriptions, physical therapy, laboratory studies, surgical intervention and a follow up appointment at a later date.

### IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

**Postoperative medicine Tramadol HCL ER 150mg #30:** Upheld

**Claims Administrator guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Criteria for use of Opioids.

**MAXIMUS guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Tramadol Page(s): 113.

**Decision rationale:** According to MTUS guidelines, Ultram (Tramadol) is a synthetic opioid indicated for the pain management but not recommended as a first line oral analgesic. In addition and according to MTUS guidelines, ongoing use of opioids should follow specific rules: (a) Prescriptions from a single practitioner taken as directed, and all prescriptions from a single pharmacy. (b) The lowest possible dose should be prescribed to improve pain and function. (c) Office: Ongoing review and documentation of pain relief, functional status, appropriate medication use, and side effects. Four domains have been proposed as most relevant for ongoing monitoring of chronic pain patients on opioids: pain relief, side effects, physical and psychosocial functioning, and the occurrence of any potentially aberrant (or non adherent) drug-related behaviors. These domains have been summarized as the "4 A's" (analgesia, activities of daily living, adverse side effects, and aberrant drug taking behaviors). The monitoring of these outcomes over time should affect therapeutic decisions and provide a framework. Although, Tramadol may be needed to help with the patient pain, there is no clear evidence of objective and recent functional and pain improvement from its previous use. There is no objective documentation of pain severity level to justify the use of tramadol in this patient. There is no clear documentation of the efficacy/safety of previous use of tramadol. There is no recent evidence of objective monitoring of compliance of the patient with his medications. Therefore, the prescription of Tramadol HCL ER 150 mg #30 is not medically necessary.
