HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:
 State(s) of Licensure: New Jersey, Michigan, California
 Certification(s)/Specialty: Neurology, Neuromuscular Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 37 year old male, who sustained an industrial injury on December 31, 2013. The injured worker was diagnosed as having cervical sprain/strain and post-concussion syndrome. Treatment and diagnostic studies to date have included CAT scan, acupuncture and medication. A progress note dated September 17, 2014 provides the injured worker complains of constant neck pain at base of skull. The plan is for magnetic resonance imaging (MRI), medication and follow-up.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Retro MRI cervical spine: Upheld

Claims Administrator guideline: Decision based on MTUS ACOEM Chapter 8 Neck and Upper Back Complaints. Decision based on Non-MTUS Citation Official Disability Guidelines, Neck and Upper Back Chapter.

MAXIMUS guideline: Decision based on MTUS ACOEM Chapter 8 Neck and Upper Back Complaints Page(s): 182.

Decision rationale: According to MTUS guidelines, MRI of the cervical spine is recommended if there is clinical or neurophysiological evidence of disc herniation or an anatomical defect and if there is failure of therapy trials. There is no clinical evidence of anatomical defect or nerve compromise in this case. Therefore, the request for an MRI of cervical spine is no medically necessary.
