HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: Maryland

Certification(s)/Specialty: Internal Medicine, Rheumatology

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 42 year old female with an industrial injury dated September 7, 2013. The injured worker diagnoses include degeneration cervical disc, headache tension, post-traumatic stress disorder and depression. She has been treated with diagnostic studies, prescribed medications and periodic follow up visits. According to the progress note dated 2/03/2015, the injured worker reported chronic neck pain. Physical exam revealed tenderness to palpitation and range of motion of the cervical spine. The treating physician prescribed Lidoderm 5% patch #30.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Lidoderm 5% patch #30: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Topical analgesics Page(s): 111.

Decision rationale: This 42 year old female has complained of neck pain since date of injury 9/7/13. She has been treated with medications. The current request is for Lidoderm 5% patch. Per the MTUS guidelines cited above, the use of topical analgesics in the treatment of chronic pain is largely experimental, and when used, is primarily recommended for the treatment of neuropathic pain when trials of first line treatments such as anticonvulsants and antidepressants have failed. There is no such documentation in the available medical records. On the basis of the MTUS guidelines cited above, the Lidoderm 5% patch is not indicated as medically necessary.
