### HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Preventive Medicine, Occupational Medicine

### CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 41 year old male, who sustained an industrial injury on 02/24/2014. He reported gradual onset of pain associated with numbness and tingling in bilateral shoulder, wrists, and hands as well as low back pain. Diagnoses include bilateral carpal tunnel syndrome, status post bilateral carpal tunnel release, chronic bilateral shoulder pain with left shoulder SLAP lesion and tendinosis of the rotator cuff tendons bilaterally, and chronic low back pain with lumbar degenerative disc disease. He is status post right knee arthroscopy 2005 and bilateral Achilles tendon surgery in 2014. Treatments to date include activity modification, medication therapy and physical therapy. Currently, he complained of pain in bilateral shoulder, low back and left ankle. On 1/5/15, the physical examination documented point tenderness with palpation in the lower right lumbar region. The plan of care included an MRI of the lumbar spine.

### IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

**MRI of the lumbar spine:** Upheld

**Claims Administrator guideline:** Decision based on MTUS ACOEM Chapter 12 Low Back Complaints Page(s): 303-305.

**MAXIMUS guideline:** Decision based on MTUS ACOEM Chapter 12 Low Back Complaints  
Page(s): 303.

**Decision rationale:** The MTUS states that unequivocal objective findings that identify specific nerve compromise on the neurologic examination are sufficient evidence to warrant imaging in patients who do not respond to treatment and who would consider surgery an option. When the neurologic examination is less clear, however, further physiologic evidence of nerve dysfunction should be obtained before ordering an imaging study. Indiscriminant imaging will result in false-positive findings, such as disk bulges, that are not the source of painful symptoms and do not warrant surgery. The medical record fails to document sufficient findings indicative of nerve root compromise which would warrant an MRI of the lumbar spine. MRI of the lumbar spine is not medically necessary.
