HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Physical Medicine & Rehabilitation, Pain Management

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 46 year old, male who sustained a work related injury on 8/31/11. The diagnoses have included chronic cervicgia, intermittent cervical radiculopathy and chronic intractable pain syndrome. Treatments have included x-rays, MRIs, electrodiagnostic studies, physical therapy and medications. In the PR-2 dated 1/30/15, the injured worker complains of neck pain. He has pain and numbness radiating into right shoulder and down arm. He rates this pain a 7-8/10 with medications and a 10/10 without medications. The treatment plan is a request for authorization for a cervical spine MRI.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

MRI of cervical spine: Upheld

Claims Administrator guideline: Decision based on MTUS ACOEM Chapter 8 Neck and Upper Back Complaints. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG), Low Back Chapter.

MAXIMUS guideline: Decision based on MTUS ACOEM Chapter 8 Neck and Upper Back Complaints Page(s): 176-177. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG), Neck Chapter, MRI Topic.

Decision rationale: Regarding the request for cervical MRI, guidelines support the use of imaging for emergence of a red flag, physiologic evidence of tissue insult or neurologic deficit, failure to progress in a strengthening program intended to avoid surgery, and for clarification of the anatomy prior to an invasive procedure. Guidelines also recommend MRI after 3 months of conservative treatment. Within the documentation available for review, there is no indication of any red flag diagnoses. Additionally there is no documentation of neurologic deficit or failure of conservative treatment for at least 3 months. In the absence of such documentation, the requested cervical MRI is not medically necessary.
