HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:
 State(s) of Licensure: New Jersey, Michigan, California
 Certification(s)/Specialty: Neurology, Neuromuscular Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 48-year-old female, who sustained an industrial injury on December 26, 2012. The injured worker was diagnosed as having lumbar myospasm, radiculopathy and sprain/strain, right ankle internal derangement and sprain/strain. Treatment and diagnostic studies to date have included acupuncture, physical therapy and chiropractic therapy. A progress note dated January 2, 2015 provides the injured worker complains of low back pain rated 8/10 with numbness and tingling. She reports cold weather and activity trigger the pain. she also has right ankle pain rated 7/10 described as sharp, stabbing and burning also triggered by cold weather and activity. Physical exam notes lumbar tenderness and decreased range of motion (ROM). The right ankle is positive for tenderness on palpation and positive inversion test. The plan includes pain management consultation, acupuncture and chiropractic.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Consultation with a pain management specialist: Upheld

Claims Administrator guideline: The Claims Administrator did not base their decision on the MTUS. Decision based on Non-MTUS Citation ACOEM Occupational Medicine PRactice Guidelines, 2nd Edition, 2004 page 127.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines
Guidelines Chronic pain programs, early intervention Page(s): 32-33.

Decision rationale: According to MTUS guidelines, the presence of red flags may indicate the need for specialty consultation. In addition, the requesting physician should provide a documentation supporting the medical necessity for a pain management evaluation with a specialist. The documentation should include the reasons, the specific goals and end point for using the expertise of a specialist. In the chronic pain programs, early intervention section of MTUS guidelines stated: "Recommendations for identification of patients that may benefit from early intervention via a multidisciplinary approach: (a) The patient's response to treatment falls outside of the established norms for their specific diagnosis without a physical explanation to explain symptom severity. (b) The patient exhibits excessive pain behavior and/or complaints compared to that expected from the diagnosis. (c) There is a previous medical history of delayed recovery. (d) The patient is not a candidate where surgery or other treatments would clearly be warranted. (e) Inadequate employer support. (f) Loss of employment for greater than 4 weeks. The most discernible indication of at risk status is lost time from work of 4 to 6 weeks. (Mayer 2003)." There is no clear documentation that the patient needs a pain management evaluation as per MTUS criteria. There is no clear documentation that the patient had delayed recovery and a response to medications that falls outside the established norm. The provider did not document the reasons, the specific goals, and end point for using the expertise of a specialist. Therefore, the request for Pain Management consultation is not medically necessary.
