### HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Physical Medicine & Rehabilitation

### CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 68 year old, female who sustained a work related injury on 4/27/98. The diagnoses have included failed back syndrome, lumbar facet arthropathy, cervical spinal stenosis, brachial neuritis/radiculitis, cervical disc degeneration, lumbar post-laminectomy syndrome and chronic pain. Treatments have included CT scans, x-rays, left shoulder surgery, right carpal tunnel release, left knee surgeries, lumbar spine surgeries and medications. In the PR-2 dated 3/4/15, the injured worker complains of aching, sharp and throbbing neck, bilateral arms, buttock, bilateral legs and bilateral feet pain. She states she has had significant relief of acute muscle spasms through the day with the Soma. She states that only certain activities cause the muscle spasms. She rates the pain a 4-6/10. The treatment plan is to refill Soma and to start weaning process off of Soma.

### IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

**Soma 350mg #30:** Upheld

**Claims Administrator guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Page(s): 29.

**MAXIMUS guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Muscle relaxants, pg 128.

**Decision rationale:** Guidelines do not recommend long-term use of this muscle relaxant for this chronic injury. Additionally, the efficacy in clinical trials has been inconsistent and most studies are small and of short duration. These medications may be useful for chronic musculoskeletal pain, but there are no long-term studies of their effectiveness or safety. Submitted reports have not adequately demonstrated the indication or medical need for this treatment and there is no report of significant clinical findings, acute flare-up or new injury to support for its long-term use. There is no report of functional improvement resulting from its previous treatment to support further use as the patient remains unchanged. The Soma 350mg #30 is not medically necessary and appropriate.
