HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: Iowa, Illinois, Hawaii

Certification(s)/Specialty: Preventive Medicine, Occupational Medicine, Public Health & General Preventive Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 43-year-old male, who sustained an industrial injury on 6/4/2014. He reported injuring his left hand on lawn mower pull cord recoil. The injured worker was diagnosed as having left hand complex regional pain syndrome, radial nerve injury, cervical myofascial pain and deconditioning of the left upper extremity. There is no record of a recent diagnostic study. Treatment to date has included physical therapy and medication management. In a progress note dated 2/20/2015, the injured worker reported continued pain but he was able to handle it better. The treating physician is requesting lidocaine ointment.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Lidocaine ointment 5% with 3 refills: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Topical Analgesics Page(s): 111-113. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG) Pain, Compound creams.

Decision rationale: MTUS and ODG recommend usage of topical analgesics as an option, but also further details "primarily recommended for neuropathic pain when trials of antidepressants and anticonvulsants have failed." The medical documents do not indicate failure of antidepressants or anticonvulsants. MTUS states, "There is little to no research to support the use of many of these agents. Any compounded product that contains at least one drug (or drug class) that is not recommended is not recommended." ODG also states that topical lidocaine is appropriate in usage as patch under certain criteria, but that "no other commercially approved topical formulations of lidocaine (whether creams, lotions or gels) are indicated for neuropathic pain." MTUS states regarding lidocaine, "Neuropathic pain Recommended for localized peripheral pain after there has been evidence of a trial of first-line therapy (tri-cyclic or SNRI antidepressants or an AED such as gabapentin or Lyrica)." MTUS indicates lidocaine "Non-neuropathic pain: Not recommended." The medical records do not indicate failure of first-line therapy for neuropathic pain and lidocaine is also not indicated for non-neuropathic pain. ODG states regarding lidocaine topical patch, "This is not a first-line treatment and is only FDA approved for post-herpetic neuralgia." Medical documents do not document the patient as having post-herpetic neuralgia. As such, the request for Lidocaine ointment 5% with 3 refills is not medically necessary.
