HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Physical Medicine & Rehabilitation

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 47-year-old female with an industrial injury dated 5/24/2012. The injured worker's diagnoses include status post crush injury, right great toe with associated subunguinal hematoma with loss of great toenail, status post-surgical repair, re-growth of right great toenail with onychocryptosis/paronychia to the medial and lateral border, and status post-surgical repair and thickened surgical scars of right great toe. Treatment consisted of diagnostic studies, prescribed medications, and periodic follow up visits. In a progress note dated 3/20/2015, the injured worker reported continued pain, primarily to the surgical scars of her right toe. Objective findings revealed moderate tenderness to the proximal end of the nail borders at the incision site, improved fungal portion of the toenail, and equal bilateral range of motion in the foot and ankle. The treating physician requested six post-operative physical therapy visits for thickened scars to the right great toe now under review.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

6 physical therapy treatments for the right great toe: Upheld

Claims Administrator guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Physical Medicine Page(s): 98-99. Decision based on Non-MTUS Citation Official Disability Guidelines (ODG), Ankle & Foot, Physical therapy.

MAXIMUS guideline: Decision based on MTUS Chronic Pain Treatment Guidelines Physical Therapy, pages 98-99.

Decision rationale: Physical therapy is considered medically necessary when the services require the judgment, knowledge, and skills of a qualified physical therapist due to the complexity and sophistication of the therapy and the physical condition of the patient. However, there is no clear measurable evidence of progress with the PT treatment already rendered including milestones of increased ROM, strength, and functional capacity. Review of submitted physician reports show no evidence of functional benefit, unchanged chronic symptom complaints, clinical findings, and functional status. There is no evidence documenting functional baseline with clear goals to be reached and the patient striving to reach those goals. The Chronic Pain Guidelines allow for visits of physical therapy with fading of treatment to an independent self-directed home program. It appears the employee has received significant therapy sessions without demonstrated evidence of functional improvement to allow for additional therapy treatments. There is no report of acute flare-up, new injuries, or change in symptom or clinical findings to support for formal PT in a patient that has been instructed on a home exercise program for this chronic injury. Submitted reports have not adequately demonstrated the indication to support further physical therapy when prior treatment rendered has not resulted in any functional benefit. The 6 physical therapy treatments for the right great toe is not medically necessary and appropriate.
