### HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Physical Medicine & Rehabilitation

### CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 56 year old female, who sustained an industrial injury on 8/11/2011. Diagnoses include partial rotator cuff tear, prolonged posttraumatic stress, degeneration cervical disc(s), cervicalgia, adhesive capsulitis shoulder, calcific tendinitis shoulder and chronic pain due to trauma. Treatment to date has included diagnostics including magnetic resonance imaging (MRI), medications, home exercise and physical therapy. Per the Primary Treating Physician's Progress Report dated 3/25/2015, the injured worker reported pain in the left shoulder and left side of the neck. Physical examination of the neck revealed left posterior tenderness to palpation with reduced range of motion. Examination of the left shoulder revealed reduced range of motion and a positive Neer's sign. There was edema in the left lateral neck and shoulder. The plan of care included additional physical therapy and authorization was requested for outpatient physical therapy (3x4) for the left shoulder.

### IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

**Outpatient physical therapy 12 sessions to the left shoulder 3 times per week for 4 weeks.:**  
Upheld

**Claims Administrator guideline:** Decision based on MTUS ACOEM. Decision based on Non-MTUS Citation Official Disability Guidelines, Shoulder Chapter.

**MAXIMUS guideline:** Decision based on MTUS Chronic Pain Treatment Guidelines Physical Therapy, pages 98-99.

**Decision rationale:** Physical therapy is considered medically necessary when the services require the judgment, knowledge, and skills of a qualified physical therapist due to the complexity and sophistication of the therapy and the physical condition of the patient. However, there is no clear measurable evidence of progress with the PT treatment already rendered including milestones of increased ROM, strength, and functional capacity. Review of submitted physician reports show no evidence of functional benefit, unchanged chronic symptom complaints, clinical findings, and functional status. There is no evidence documenting functional baseline with clear goals to be reached and the patient striving to reach those goals. The Chronic Pain Guidelines allow for visits of physical therapy with fading of treatment to an independent self-directed home program. It appears the employee has received significant therapy sessions without demonstrated evidence of functional improvement to allow for additional therapy treatments. There is no report of acute flare-up, new injuries, or change in symptom or clinical findings to support for formal PT in a patient that has been instructed on a home exercise program for this chronic injury. Submitted reports have not adequately demonstrated the indication to support further physical therapy when prior treatment rendered has not resulted in any functional benefit. The Outpatient physical therapy 12 sessions to the left shoulder 3 times per week for 4 weeks is not medically necessary and appropriate.
