HOW THE IMR FINAL DETERMINATION WAS MADE

MAXIMUS Federal Services sent the complete case file to an expert reviewer. He/she has no affiliation with the employer, employee, providers or the claims administrator. He/she has been in active clinical practice for more than five years and is currently working at least 24 hours a week in active practice. The expert reviewer was selected based on his/her clinical experience, education, background, and expertise in the same or similar specialties that evaluate and/or treat the medical condition and disputed items/Service. He/she is familiar with governing laws and regulations, including the strength of evidence hierarchy that applies to Independent Medical Review determinations.

The Expert Reviewer has the following credentials:

State(s) of Licensure: California

Certification(s)/Specialty: Chiropractor, Oriental Medicine

CLINICAL CASE SUMMARY

The expert reviewer developed the following clinical case summary based on a review of the case file, including all medical records:

The injured worker is a 48 year old male, who sustained an industrial injury on 2/18/2013. He reported cumulative trauma while working as a firefighter. The injured worker was diagnosed as having bilateral elbow early arthrosis-right greater than left, status post right elbow arthroscopy with extensive debridement, possible right elbow loose body, bilateral elbow tendinopathy and bilateral elbow cubital symptoms. There is no record of a recent diagnostic study. Treatment to date has included acupuncture and physical therapy, which was documented to provide positive results, night splinting, deep tissue massage, home exercises and medication management. In a progress note dated 4/13/2015, the injured worker complains of constant right elbow pain. The treating physician is requesting 12 sessions of acupuncture.

IMR ISSUES, DECISIONS AND RATIONALES

The Final Determination was based on decisions for the disputed items/services set forth below:

Acupuncture 12 sessions: Upheld

Claims Administrator guideline: Decision based on MTUS ACOEM Chapter 10 Elbow Disorders (Revised 2007), Acupuncture Treatment Guidelines.

MAXIMUS guideline: Decision based on MTUS Acupuncture Treatment Guidelines.

Decision rationale: Patient has had prior acupuncture treatment. Provider requested additional 12 acupuncture sessions which were non-certified by the utilization review. There is no assessment in the provided medical records of functional efficacy with prior acupuncture visits. The documentation fails to provide baseline of activities of daily living and examples of improvement in activities of daily living as result of acupuncture. Medical reports reveal little evidence of significant changes or improvement in findings, revealing a patient who has not achieved significant objective functional improvement to warrant additional treatment. Additional visits may be rendered if the patient has documented objective functional improvement. Per MTUS guidelines, Functional improvement means either a clinically significant improvement in activities of daily living or a reduction in work restrictions as measured during the history and physical exam or decrease in medication intake. Per review of evidence and guidelines, 12 acupuncture treatments are not medically necessary.
